Instructions – PMB-01-6002

Thank you for your purchase! We are confident that you will be pleased with the quality of our product.

**Parts List:**
- 1-Kickstand
- 1-Bracket
- 1-8x25 SH
- 1-8x80 FH
- 1-Adapter

**NOTE:** We recommend using a thread-locking agent on all bolt threads.

**To install your new kickstand:**

1. You must modify the stock chain slider to accommodate the kickstand lower mounting spacer.
2. Remove the lower chain slider and bolt from the suspension linkage pivot.
3. Place the chain slider in a vise. Figure 1
4. Use a ½” drill bit in a drill press or a hand drill and enlarge the hole in the chain slider as shown in Figure 1, make sure your drill bit is parallel with the hole to ensure proper placement of the chain slider.
5. As you drill, the metal bushing will be pushed out the back side of the chain slider; this is normal and will aid you in enlarging the hole.
6. Insert the lower mounting spacer into the chain slider as shown in Figure 2.
7. Install bracket into the backside of the frame, between frame and swing arm. Figure 3
8. Install the kickstand onto the bike using the 8x25mm socket head bolt through the upper bolt location and into the bracket. Do not tighten yet.
9. Install the chain slider with the lower mounting adapter behind the lower kickstand mounting hole and insert the 8x80mm flat head bolt.
10. Tighten both bolts.
11. Periodically check all mounting bolts for tightness.

**To prevent damage:**

- Clean and lubricate the kickstand pivot area after each ride! We recommend using a penetrating lube, such as WD-40. If necessary, you can remove the back cover plate for additional cleaning.
- Carefully position kickstand up and down.
- Do not start/sit on bike with the kickstand down.
